Thermally Assisted Pet Dish

Claims

What is claimed is:

1. The pet dishes contents are thermally controlled by a conditioning source in either direction to aid in the longevity of the refreshment.
2. The dish and or all of its parts are easily cleaned.
3. Multiple conditioning sources can be utilized to enhance the performance of the invention.
4. Regeneration of the conditioning sources may take shape in many forms.
5. The size of the conditioning sources can be adjusted and or easily removed to accommodate the regeneration means.
6. Insulation redirects the BTU's from the conditioning sources towards the dishes contents and or shields the exterior shell from the pet and or its owner.
7. The dish is constructed such that it has non-skid, and weight distribution qualities; aiding in keeping the dish upright.
8. The dish is constructed such that it can be used independently or with ungenerated conditioning sources for every day use.
9. No electricity is needed were the pet is to use the invention.
10. Providing and economical way to extend the longevity of a pet's refreshment in either direction by eliminating the need for two dishes.
